

OUTSIDE CLASSROOM

Beyond the Classroom

The benefits of learning outside the classroom are vast...

Children are learning everywhere, and all the time, and they need a variety of learning experiences to fully develop. In our Outside Classroom, our students are growing in many areas such as gross and fine motor development, social-emotional development, and creative expression.

Our outside classroom offers physical, cognitive and psychological benefits to our students. It also teaches our students a better appreciation of nature and the environment, and increases their physical development, capabilities, and activities..

Through projects and group activities our outside classroom supports stronger language, problem-solving, and communication skills. In the outside classroom environment our students develop an interest in science and math by connecting with nature. Outside-learning fosters learning through self-initiation, control and personal responsibility. Students who learn outside are happier, have higher self-esteem, and build relationships more effectively when they are in a cooperative, non-competitive setting.

St. Rita School's outside classroom fosters strong stewardship skills for the environment. This learning inspires student appreciation for nature, and encourages their interest in the world around them. This greater learning reaches beyond our community and has a global impact, as well.
